Code-B IMS — End User Documentation

Module: User Login and Registration

Project documentation template. Replace the bracketed deployment details and insert real screenshots after you deploy and test your application.

1. Module overview

The Login and Registration module controls access to the Code-B Internal Management System. It supports user registration, login, role-aware dashboard access, password recovery, email verification, and logout.

2. User roles

Admin: Intended to manage users and access all system functionalities. **Sales Person:** Intended to access restricted sales and invoicing features. Public self-registration is not permitted to grant Admin privileges.

3. Registration steps

1. Open the application URL: [INSERT LIVE FRONTEND URL].
2. Select Register and enter your full name and email address.
3. Create a password with at least eight characters.
4. Select Sales Person and submit the form.
5. Open the verification email and follow the verification link (SMTP must be configured).

4. Login steps

1. Open the application and select Login.
2. Enter your registered email and password.
3. Select Sign in.
4. After successful authentication, the dashboard displays your name and role.

5. Password recovery

Select Forgot your password? on the login screen, enter your registered email, and submit. Follow the reset link received by email. Enter the reset token and a new password. SMTP must be configured for email delivery.

6. Logout and inactivity

Select Logout to clear the browser's authentication token. The frontend signs the user out after 15 minutes without detected activity. The backend JWT has a configurable default lifetime of one hour.

7. Troubleshooting

- Connection error: check that the backend is running and VITE_API_URL points to it.
- Login rejected: verify the email and password; check whether email verification is enabled.
- No email: check spam and SMTP settings.
- Database error: check MySQL availability and database environment variables.

- Expired token: request a new verification or password-reset email.

8. Deployment details — complete before submission

GitHub repository: [INSERT REPOSITORY URL]
Live application: [INSERT FRONTEND URL]
Backend API: [INSERT BACKEND URL]
Documentation prepared by: [YOUR NAME]
Date: [DATE]

9. Screenshots to insert

Add genuine screenshots of: Registration page, Login page, verification success, dashboard after login, forgot-password response, and deployed application in a browser. Do not use sample screenshots as proof of deployment.

10. Security note

Never share credentials or reset links. Production must use HTTPS, secure environment variables, configured SMTP, restricted administrator provisioning, and a tested production database.
